Additional evidence for the particular ordering of the types of motivation stems from evidence of an underlying quasi-simplex pattern (Ryan and Connell 1989), where the constructs are ordered according to their conceptual similarity. Variables deemed more similar will be more highly positively correlated than those that are more discrepant.

In recent years, information technology has had a profound effect on human resources (HR) processes and practices. However, relatively little research has examined its effectiveness, and most of the existing studies have not assessed the degree to which these new systems enable organizations to reach their HR goals of attracting, motivating and retaining employees.
