As a member of the Scala team at EPFL, Aleksandar actively contributed to the Scala programming language, and he has worked on programming abstractions for concurrency, data-parallel programming support, and concurrent data structures for Scala. He created the Scala Parallel Collections framework, which is a library for high-level data-parallel programming in Scala, and participated in working groups for Scala concurrency libraries, such as Futures, Promises, and ScalaSTM.

Learning Concurrent Programming: A Constructionist Approach 201 Animate systems are simulated dynamic worlds that contain multiple independent but interacting graphic actors [10] The environment we are describing in this paper allows the definition of animated concurrent worlds programmable by an agent-based

programming language.
