Glasgow coma scale (GCS) score of less than 15 on initial assessment. Any loss of consciousness as a result of the injury. Any focal neurological deficit since the injury.. Any suspicion of a skull fracture or penetrating head injury since the injury.. Amnesia for events before or after the injury []. Persistent headache since the injury.

Head injury: assessment and early management | Guidance

Psychological evaluation is defined as a way of assessing an individual's behavior, personality, cognitive abilities, and several other domains. The purpose behind many modern psychological evaluations is to try to pinpoint what is happening in someone's psychological life that may be inhibiting their ability to behave or feel in more appropriate or constructive ways; it is the mental ...

Generally there are three treatment stages for stroke: prevention, therapy immediately after the stroke, and post-stroke rehabilitation. Therapies to prevent a first or recurrent stroke are based on treating an individual's underlying risk factors for stroke, such as hypertension, atrial fibrillation, and diabetes.
