In Organic Chemistry, synthesis and retrosynthesis go hand in hand. While there isn't a clear distinction, I like to think of synthesis as forward thinking and retrosynthesis as the reverse.. Synthesis is a topic that is typically introduced in Organic Chemistry 1, right after studying alkyne reactions.

Artificial gene synthesis, sometimes known as DNA printing is a method in synthetic biology that is used to create artificial genes in the laboratory. Based on solid-phase DNA synthesis, it differs from molecular cloning and polymerase chain reaction (PCR) in that it does not have to begin with preexisting DNA sequences. Therefore, it is possible to make a completely synthetic double-stranded ...

where a_j refers to the input variables, W_{ij} is the weight of input node j on node i and function g is the activation function, which is normally a nonlinear function (e.g., sigmoid or Gaussian function) to transform the linear combination of input signal from input nodes to an output value. The training of an ANN is done by iterative modification of the weight values in the network to ...
