Wind power is the use of air flow through wind turbines to provide the mechanical power to turn electric generators. Wind power, as an alternative to burning fossil fuels, is plentiful, renewable, widely distributed, clean, produces no greenhouse gas emissions during operation, consumes no water, and uses little land. [better source needed] The net effects on the environment are far less ...

This post reviews the weird and wonderful world of high altitude wind power. It looks into the reasons for wanting to go high, explains tethered flight and explores the main competing technologies of 1) airborne generation (Google Makani) and 2) ground based generation (KiteGen) and compares their strengths and weaknesses.

Disadvantages of wind energy are good in number. Due to the limitations of wind energy, it is not a favorite choice of energy source. Some of the major disadvantages of wind energy are that; no electricity is produced if there is no wind, it is expensive to install, big acreages of land have to be used, and the turbines kill birds.
